

HT Analytics

Overview

Agility in mining smart value from corporate and Big Data is a key success factor of business today. However, there are very limited existing tools that can provide the solution without a huge expenditure. Some of the key challenges include:

- Resource and technical barriers
- Costly and complex maintenance
- Lack of a truly integrated analytic and development platform
- Solution is not scalable and extensible

HT Analytics is developed to offer a consolidated analytics platform empowered by advanced Big Data technology, powerful data services, plug & play data visualizations, and workflow management. HT Analytics makes sophisticated data analytics methodology and technology available to large numbers of business users and enabling big data analytics to be a normal business process in enterprises.

Product Features

- Data Source Management
 - Support most popular RDBMS and NoSQL (Hbase, Cassandra etc.)
 - Public data source link with web service API
 - Big Data ready with support to HDFS/MapReduce
 - Approved data source to ensure data accuracy and integrity
- Plug and Play Analytic Algorithms
 - Easily upload your own algorithms written in R, Java and Mahout etc.
 - Share your algorithms with others
- Extensible Data Visualization
 - Mobile friendly data visualization model
 - Standard and customized business solutions
- Flexible Scheduling

On-demand scheduling analytical jobs
Deliver result in multiple formats to PC, mobile and tablet

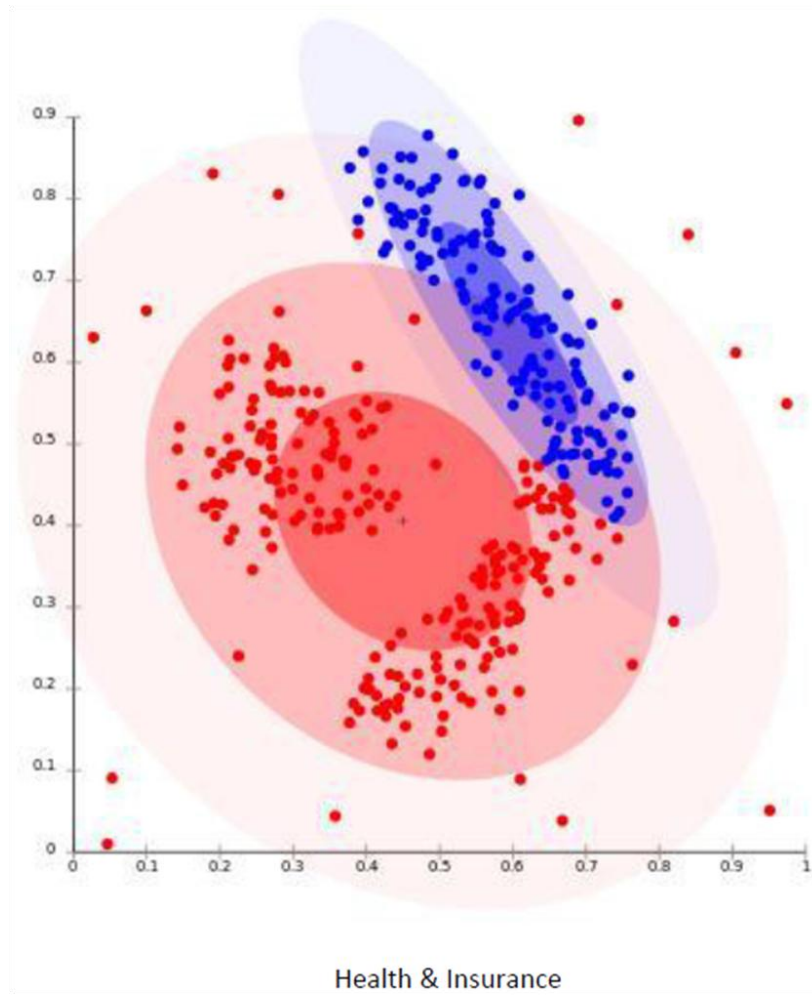

HT Analytics UI Screen

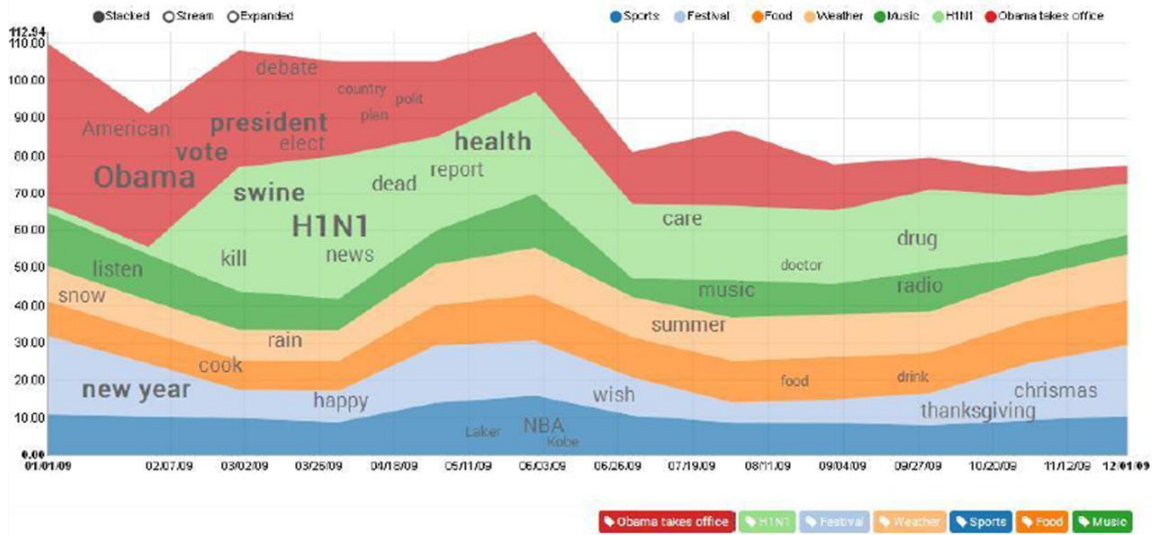

Specialized Services

- Enterprise data strategy consulting
- Big Data strategy consulting
- Data modeling and algorithm development
- Data visualization programming
- Data-centric application development
- Data analyst/scientist academic program (partner with Zhejiang University, China PRC)
